

SSA Flow Monitor

Provides Early Warning of Flow Reduction in any Plumbing System BEFORE Damage Occurs

SSA-HH series

MFD Alert & Alarm Banner Examples

How it Works ...

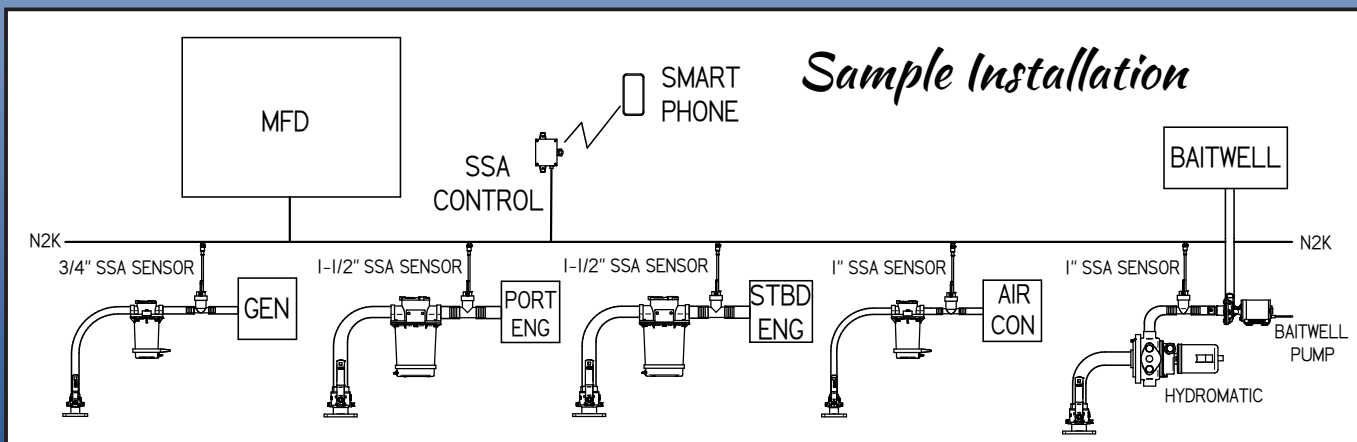

SSA provides a method for real time flow monitoring of any or all plumbing systems on your boat. Reduced flow is reported immediately by audible and visual alerts and alarms on the vessel MFD. (See screenshots at right)

SSA fits plumbing sizes 3/4" to 3" and works with constant flow or variable flow systems. Wi-Fi set-up and calibration through your 'Smart Phone' and SSA Control enables the user to define 'normal' flow and to set thresholds for alerts and alarms. Common causes of flow reduction are reported in seconds.

If you have a Hydromatic® Self-Cleaning Seachest/Strainer ...

SSA can be set to command a one-time cleaning cycle when reduced flow is detected.

If you want to see full graphics on your MFD ...
Add GROCO G-Gate® to monitor all of the SSA sensors on your boat.

Sample Installation

GROCO®
